Summary

National Deworming Day is an initiative that takes place in India and some other countries to address the issue of soil-transmitted helminth infections, particularly in children. This program involves the mass administration of deworming medication to school-aged children and preschool children. The event was held at seminar hall II on 19.03.2020 and witnessed active participation from the students community, volunteers, and health professionals. The medication helps in the elimination of parasitic worms, which can have detrimental effects on children's health, nutrition, and cognitive development.
